DOC TYPES

13

TEAM RULES

Intent + PRD + Planning

ดึง intent ที่แท้จริง · เขียน requirement · ework task

5 skills

interview-me v2.1

ดึง intent ที่แท้จริงจาก user — ตามทีละข้อจน confidence 95% · scale-aware (product/feature/page/task)

reads docs/brand/ docs/product/ docs/intent/

writes docs/intent/<topic>.md

trigger: "interview me" · "grill me" · "are we sure?" · vague ask

prd v2.0

Product Requirements Document · 3 targets (stakeholder / dev / AI agent) · Phase 0 scan + cite sources

reads docs/intent/ docs/product/ docs/brand/

writes prd.md

trigger: "write PRD" · "document requirements" · "plan a feature"

user-personas

สร้าง User Persona จาก research data — demographic + goals + pains + behavior

reads research notes · interview transcripts

writes personas.md

trigger: "create persona" · "user persona"

notion-planning

วางแผนงานใน Notion DB — task · sprint · assign owner

reads prd.md personas.md

writes Notion pages + tasks

trigger: "plan in Notion" · "ework task"

masterprompt

แปลง idea ธรรมดา → structured prompt — universal prompt engineer · สำหรับ delegate ให้ AI ตัวอื่น

reads user idea + context

writes structured prompt (in chat)

trigger: "help me write a prompt" · "I want to create..."

UX Blueprint + Spec

ຈົນ flow + IA + edge case · ເຟັ້ນ technical spec ຄ່ອນ code

2 skills

ux-strategist v3.2

UX Blueprint · user flow + IA + edge cases + heuristics · auto-embed Mermaid diagrams (color-coded) · scale-aware (feature/page/product) · save dual md+html

reads docs/intent/ docs/blueprints/ docs/product/ docs/brand/ prd.md

writes docs/blueprints/ux-<feature>.md docs/blueprints/ux-<feature>.html

trigger: "plan a feature" · "user flow" · "wireframe" · "UX blueprint"

spec-driven-development

ເຟັ້ນ spec ຄ່ອນ code — 4-phase gated workflow (Specify → Plan → Tasks → Implement) · ຄ້າບຂ້າມ phase

reads prd.md docs/blueprints/

writes spec.md + plan + tasks

trigger: "write spec" · "new project" · "spec ຄ່ອນ code"

Design System

tokens · icons · atoms · validate · remix · 1 ครั้งต่อ project

5 skills

design-builder v6.2

สร้าง design.md (tokens-only) · dual-path (zero / client-given) · WCAG validate · mood-driven · Phase 0a scan docs/brand/

reads docs/brand/ docs/product/ + user input

writes design.md

trigger: "build design system" · "create design.md"

design-icon-builder v2.3

เลือก icon library ตาม mood · fetch SVG จาก CDN · ตาม scope ก้อน (starter 12 / common 36 / extended 60 / custom)

reads design.md

writes design.md (iconography block) + ./icons/*.svg

trigger: "build icons" · "icon system" · "ดึง icon"

design-component-builder v5

atoms / molecules / organisms · DTCG-aligned · 2-tier tokens (sys + comp) · diff-only variants · 9 atoms default

reads design.md

writes components.json tokens.css components/<name>.html

trigger: "build components" · "atomic components"

design-md-audit v6.1

audit DS — schema validate · cross-file refs · WCAG AA contrast · downward direction · `--migrate-to-json` flag

reads design.md components.json ui.json patterns.json

writes audit-report.md

trigger: "audit DS" · "validate design system"

design-remix

mix design จาก brand references — "Linear's typography + Notion's spacing + Stripe's color" → synthesize เป็น DESIGN.md ใหม่

reads brand refs · design-library/

writes design.md (mixed)

trigger: "mix design" · "remix design"

Pages + Patterns + Impl

compose atoms → pages then blueprint · แล้วต่อ implementation

3 skills

design-ui-builder v5.1

สร้าง ui.json + patterns.json + pages — dual-mode (iframe / inline) · Phase 0 scan docs/blueprints/ux-*.md auto pages

reads design.md components.json docs/blueprints/ux-*.md

writes ui.json patterns.json pages/<name>.html

trigger: "build UI" · "create pages" · "compose page"

ui-implementation-specialist

map component + design token จาก Blueprint → code-ready · ใช้ต่อ handoff dev

reads components.json ui.json tokens.css + design spec

writes component code + blueprint

trigger: "implement UI" · "map components" · "handoff"

frontend-ui-engineering

Front-end best practices — component patterns · performance · accessibility · review

reads component source code

writes review notes

trigger: "review code" · "frontend best practice"

💡 Pattern

UI phase ทำ **ต่อ feature** (ไม่ใช่ทั้ง product)

DS Base ทำ **ครั้งเดียวต่อ project** — UI re-use ตลอด

Blueprint คือ input หลัก — กำหนดว่า pages อะไรต้องสร้าง

Microcopy + Quality

brand-voice-aware copy · modal · audit · browser test

4 skills

ux-writer v2.1

microcopy · labels · errors · empty states · CTA · scannability + a11y check · Phase 0 scan brand voice

reads docs/brand/voice-tone.md docs/blueprints/ docs/intent/

writes microcopy.md

trigger: "write copy" · "microcopy" · "rewrite UI text"

modal-writer v2.0

Thai modal copy (Title + Body + 2 CTAs) · 6 modal types · 12 forbidden patterns auto-flag · Phase 0 scan brand voice

reads docs/brand/voice-tone.md docs/blueprints/

writes modal-copy.md

trigger: "เขียน modal" · "review modal" · "modal copy"

audit

audit interface — accessibility · performance · theming · responsive · severity rating + recommendations

reads HTML/CSS source + screenshot

writes audit-report.md

trigger: "audit interface" · "a11y check"

browser-testing-with-devtools

test UI ใน real browser via Chrome DevTools MCP — DOM · network · console · performance · a11y

reads live URL + DevTools data

writes test-report.md

trigger: "test in browser" · "DevTools check"

Figma Integration

DS compliance check · sync Figma Variables + Component Sets

4 skills

figma-audit-ui

audit Figma file — DS compliance check (Thai · consumer apps) · per-element pinpoint · draft-before-post

reads Figma file (via MCP)

writes `audit-report.md` + Figma comments

trigger: "audit Figma" · "ตรวจ Figma DS"

figma-push-tokens

sync DS tokens → Figma Variable Collection · light + dark mode · idempotent (รับซ้ำได้)

reads `design.md` (semantic tokens)

writes Figma Variable Collection

trigger: "push tokens to Figma" · "sync variables"

figma-push-components

push 5 atoms → Figma Component Sets · variant × size × state · Variable bindings auto

reads `components.json` + Figma Variables

writes Figma Component Sets

trigger: "push components" · "sync atoms to Figma"

figma-rename-tokens

normalize Figma Variable names → canonical DS naming · non-destructive (preserve bindings)

reads Figma Variables (current state)

writes Figma Variables (renamed)

trigger: "rename Figma variables" · "normalize tokens"

Export + Styleguide + Launch

cross-platform export · single styleguide · go-live

3 skills

design-styleguide v3

aggregator — scan components/*.html + pages/*.html + patterns/*.html → single styleguide.html + TOC

reads components/*.html pages/*.html patterns/*.html

writes styleguide.html

trigger: "build styleguide" · "aggregate components"

design-export-dtcg

export → W3C DTCG tokens.json + Style Dictionary configs · cross-platform (iOS Swift / Android Kotlin / Flutter Dart / Tailwind)

reads design.md components.json

writes tokens.json + Style Dictionary configs

trigger: "export DTCG" · "tokens.json" · "cross-platform tokens"

shipping-and-launch

เตรียม launch checklist + go-live workflow — pre-launch sanity · monitoring setup · rollback plan

reads ทุก artifact ก่อนหน้า + audit reports

writes launch-checklist.md

trigger: "launch" · "go-live" · "shipping checklist"

Handoff order

design-md-audit ก่อนเสมอ
→ gate ไม่ให้ broken refs push เข้า Figma

figma-push-tokens ก่อน components
→ tokens ต้องมีก่อน components ผูก binding ได้

design-export-dtcg ส่วนสุดท้าย
→ ส่ง dev mobile/web ใช้

Always-on Helpers

setup · sprint tracking · email digest

3 skills

check-setup

onboarding guide — auto-detect Node/Git/Claude/Figma MCP · แลอง diagnostic · install ที่ขาดก๊าะ step

reads system state · env vars

writes diagnostic report (chat)

trigger: "/check-setup" · "เริ่มยังงั้" · "first time"

jira-tracker

sprint tracking — รัว Mon/Wed/Fri 9am · status change · manday overrun · sprint ending alert · Lark webhook

reads Jira API (Atlassian MCP) + state.json

writes Lark message + state diff

trigger: scheduled (Mon/Wed/Fri) หรือ "check sprint"

email-summarizer

Gmail digest → Lark webhook · filter by label · summary + action items extract

reads Gmail (MCP)

writes Lark message digest

trigger: scheduled หรือ "summarize email"

💡 **Always-on pattern** — utilities 3 ตัวนี้ไม่ใช่ chain step (ไม่ produce file ที่ skill อื่นอ่าน). ใช้ได้ทุกตอนของ project · เปิด Claude Code session ใหม่ แล้วเรียกเลย

check-setup — session แรกของ onboarding · ใช้ครั้งเดียว

jira-tracker — รัว cron / scheduled-task auto

email-summarizer — มี Gmail MCP setup ก่อน

SUMMARY

Pipeline Overview

end-to-end chain · doc-driven · เริ่มจาก marketing → handoff

29 skills · 7 stages

CORE FILE FLOW

5 RULES TO AVOID CONFLICT

- R1. prd Target C vs spec-driven → ใช้คู่กันได้ (Target C = artifact, spec-driven = process)
- R2. ux-strategist scan prd — อย่าเขียน user goals ใหญ่
- R3. spec-drinr scan blueprint — อย่าเขียน business context ใหญ่
- R4. DS chain มาทีหลัง — consume blueprint + components.json
- R5. Source attribution ทุก section (cite source file) — ไม่มี orphan content

TEAM RULES (apply ทุก session)

13 ข้อ · 3 layers: Security 1-6 · Engineering 7-11 · Persistence 12-13
ติดตั้งครั้งเดียว: bash team-rules/install-team-rules.sh → symlink + @import → git pull = auto sync
